

REPLACING THE SKIRT:

Step 1: Turn Rebounder upside down with legs pointing up.

Step 2: Remove all of the rubber tips from the legs and set aside. Inside of the legs, you will see a hook where the spring attaches to the leg. Using the Spring Tool, hook the tool to the spring and pull up. Detach the spring from the leg. Remove 3 of the legs from one side of the Urban Rebounder and set aside.

Step 3: Slip the skirt off of the frame starting from the side of the Rebounder with the legs removed, slide skirt under frame, and pull off the side of the Rebounder with the legs still attached. Discard the old skirt.

Step 4: Starting on the side of the Rebounder with the 3 legs still attached, slip the skirt around the legs and continue around the frame until in place.

Slide mat over leg springs on side of Urban Rebounder with the legs removed. Make sure that the hinge area of the skirt is properly aligned over the hinges on both sides of the Urban Rebounder.

Using the spring tool again, hook the springs and pull up to reattach the springs to the legs.

Step 6: Replace the rubber tips.

Step 5: Slide the removed legs on over the springs.
